

SREEJA POLLREDDY

Siddipet, Telangana

+91-9398828646 pollreddysreeja@gmail.com linkedin.com/in/sreeja-pollreddy github.com/PollreddySreeja

Profile

Goal-oriented engineering graduate with a strong passion for software development and experienced in building end-to-end systems. Eager to apply technical skills to solve real-world problems while continuously learning and adapting to new technologies.

Education

Geethanjali College of Engineering and Technology <i>B.Tech in Electronics and Communication Engineering - CGPA: 8.0/10</i>	2022 – 2026 Cheeryal, Telangana
Narayana Junior College <i>Intermediate - 97%</i>	2020 – 2022 Mallampet, Telangana
St. Mary's Vidyaniketan High School <i>High School - CGPA: 10/10</i>	2019 – 2020 Pregnapur, Telangana

Projects

Deep CNN Feature Extraction for Fracture Diagnosis (<i>Python, CNN, Random Forest, Keras</i>)	Nov 2025 – Jan 2026
- Built an end-to-end computer vision pipeline for X-ray bone classification utilizing a heavily optimized subset of the 40K+ image MURA dataset. - Developed a hybrid CNN–Random Forest model with 200 estimators, achieving 91% classification accuracy while reducing overfitting. - Optimized data processing using image normalization, feature vectorization with 3072 features per image, and standardized input scaling to 32×32, improving model efficiency. - Implemented an ML workflow with an 80–20 train-test split and evaluated performance using standard metrics such as precision, recall, F1-score, and accuracy. - Built a Tkinter-based GUI for instant prediction and developed a clinical decision-support prototype for fracture detection.	
FoodBridge – Smart Surplus Food Redistribution System (<i>Java, MySQL, HTML, CSS, JavaScript</i>)	Jul 2025 – Sep 2025
- Engineered a full-stack web platform connecting 4 user roles including restaurants, NGOs, volunteers, and admin to streamline surplus food redistribution and improve coordination efficiency. - Implemented location-based matching to link donors with nearby NGOs, optimizing allocation and reducing manual delays. - Developed a food safety timer and volunteer pickup module to ensure timely delivery of safe food. - Integrated a MySQL database schema with 5 core entities to manage the complete food donation process.	
AI-Driven Blood Group Detection using Deep Learning (<i>Python, TensorFlow, Django, MySQL</i>)	Jan 2025 – Apr 2025
- Built a deep learning-based system to classify blood groups from agglutination images using a CNN architecture. - Implemented an image preprocessing pipeline with resizing, denoising, normalization, and segmentation to enhance quality. - Integrated CNN with Firefly Optimization for hyperparameter tuning, achieving 97% classification accuracy. - Developed a Django-based web application for blood group prediction through image upload with automated preprocessing and model inference. - Evaluated the model using standard performance metrics to ensure reliable multi-class classification.	

Publications

→

- “Deep CNN Feature Extraction with Ensemble Synergy for Accurate Fracture Diagnosis,” presented at the IEEE 10th International Conference on Research in Intelligent Computing in Engineering (RICE-2025) and published in IEEE Xplore.

Skills

Programming Languages: Python, SQL, Java, HTML5, CSS3, JavaScript

Frameworks & Libraries: React.js, Node.js, Express.js, Django, JWT, PyTorch, TensorFlow, Keras

Developer Tools: VS Code, MySQL, GitHub, Tkinter, Arduino IDE, MATLAB, MongoDB Atlas

Soft Skills: Problem Solving, Communication, Analytical Thinking, Teamwork, Adaptability, Leadership

Certifications & Achievements

- AWS Cloud Practitioner Essentials — Amazon Web Services, 2026
- GenAI Powered Data Analytics Job Simulation — TATA (Forage), 2026
- Microsoft AI Skills Fest, 2026
- Python Essentials 2 — Cisco Networking Academy, 2026
- First Prize Winner: Design Thinking Ideas & Projects Expo – IEEE SB & IIC, 2024
- Champion: Instrumania 3.0 Technical Quiz Competition, 2023
